

Bais Yaakov of Baltimore Middle School Hosts Academic Fairs

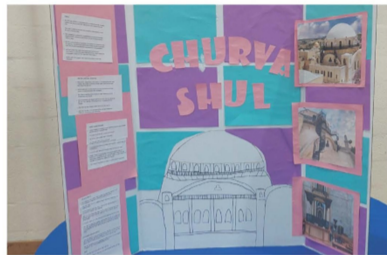

In recent weeks, Bais Yaakov of Baltimore Middle School students produced several highly impressive academic fairs.

On April 28th, the middle school hallways were filled with excitement and vibrant learning as students showcased their learning about the Jewish world through the M'Arba Kanfos Ha'Aretz Fair. Students explored the rich customs, Rabbanim, foods, and clothing representing Jewish communities from around the globe, while the delicious assortment of country-themed cookies added a special touch of warmth and creativity.

The following week, on May 5th, the eighth graders, under the guidance of their science teacher, Mrs. Shari Rochkind, thrilled the crowd at the school's inaugural STEM Fair. Mrs. Rochkind transformed the traditional science fair into an engaging Amusement Park-themed STEM Fair that blended creativity, hands-on learning, and important skills. It was especially meaningful to see the students' excitement and appreciation as they proudly showcased projects that reflected both effort and deep learning. The creativity was on full display through

working roller coasters, haunted houses, vending machines, merry-go-rounds, and more, as students applied concepts such as forces, energy, friction, simple machines, precision, time management, and teamwork.

On May 13th, at the Eretz Yisrael Fair, students shared their learning about the cities, *Gedolim*, and experience of life in Eretz Yisrael and *aliyah*. The positive energy and enthusiasm at both events were palpable. Much appreciation goes to all the teachers who displayed incredible dedication and care in coordinating these memorable fairs.
